Saw-Blade Selector

Saw-Blade Selector

Wall-mount this handy holder near the stationary saws in your shop, or, if you like, place it on a convenient benchtop.

You'll find it the ideal storage project for organizing an assortment of saw blades and a dado-blade set.

To make the notches, cut the side pieces to shape, and mark the notch locations. Then, mount a 1/4" dado blade to your tablesaw, tilt the blade 45° from center, and using your miter gauge with an

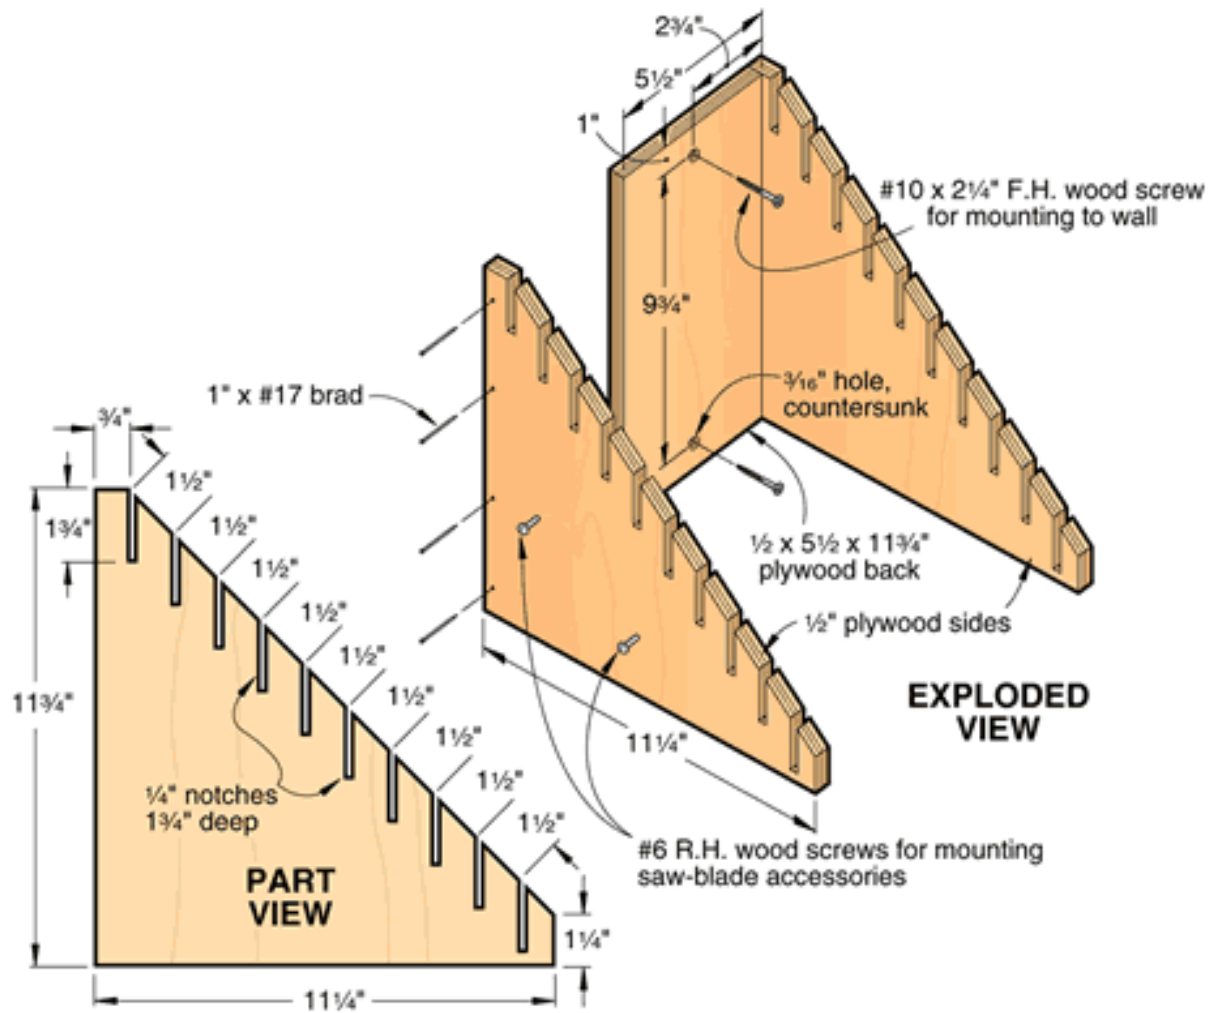

attached auxiliary wood fence for support, make the cuts.
